IBEX 35 FUTURES

GENERAL CONDITIONS

1. Introduction

2. Underlying asset

3. Technical Specifications

4. Timetable

5. Means of Settlement at Expiration

6. Contract Settlement Price

7. Margin Calculation

8. Daily Settlement of Gains and Losses

1. Introduction

These General Conditions modify the prior version with the aim of (i) adjusting the calculation of the Settlement Price at Expiration in special circumstances when one or more stocks are not tradable during the period of calculation, referring to a Circular for the detailed calculation in those cases (ii) substituting the Annex of the Technical regulations for the composition and calculation of the IBEX 35, for the section number 2 where a link to Sociedad de Bolsas web is provided (iii) modifying the item Futures Price Quotation in section 3 to mention that the minimun price fluctuation will be set according to the quotation of the underlying asset or the Market practice, and it will be set by means of a Circular.

These General Conditions describe the characteristics of the IBEX 35 Futures Contract as required by the Regulations of the Market for Equity Related Financial Derivatives in their article 3.1.

The IBEX 35 Futures Contract has as its Underlying Security the IBEX 35 Index multiplied by 10 EURO.

As a consequence of the trading of the abovementioned instrument, the trading parties (MEFF RV, the Members and the Clients) acquire the rights and obligations set out in articles 5, 6, 7 and 8 of the Market Regulations.

These General Conditions form part of the regulations of the Market and develop those provisions where the Regulations refer to the General Conditions of each Contract. The terms used have the same sense as defined in article 2.1 of the Regulations.

The Members with access to trading and settlement shall be all those which are Market Members, with the rights and obligations as determined by the class of Member to which they belong.

The limits of the Members' and Clients' open positions, if any, shall be determined by Circular under the terms set out by the Regulations.

2. Underlying asset

The IBEX 35 Futures Contract has as Underlying Asset the IBEX 35 Index, managed and published by Sociedad de Bolsas.

Rules regarding the calculation and composition of the IBEX 35 are described in the document Technical rules for the composition and calculation of the IBEX 35, which is available at http:/www.sbolsas.com

3. Technical specifications

Underlying asset:	The IBEX 35 Index.
Multiplier:	10 EURO
Contract Size:	The IBEX 35 Index times the Multiplier.
Expirations:	Every month. The three nearest expirations, at least, shall be traded at all times.
Expiration Date:	The third Friday of the expiration month.
Contract Settlement Date:	First Business Day following the Expiration Date.
Last trading day:	The Expiration Date.
Futures Price Quotation:	In whole Index points with a minimum fluctuation set according to the quotation of the underlying asset and/or the Market practice, which will be established by Circular. The minumun fluctuation shall be different in pre-arranged trades between Members.
Maximum Price Fluctuation:	None.
Daily Settlement of Gains and Losses:	Before the start of the session of the Business Day following the date of the transaction, by means of cash transfer of the difference with the Daily Settlement Price.
Settlement of Commissions:	First Business Day following the date of the Transaction.
Margins:	Variable in function to the portfolio of Options and Futures (see Margin Calculation section). Margins shall be supplied before the start of the session of the Business Day following the date of the calculation.
Daily Settlement Price:	Arithmetic Average between the best buy and sale price for each expiration at the close of the Market each day.

4. Timetable

The trading timetable shall be determined by MEFF RV through the corresponding Circular.

As established in the Market Regulations, the trading timetable shall always be in the period between 8:00 and 22:00.

5. Means of Contract Settlement

Settlement at Expiration of Contracts shall be made by cash transfer of the difference with the Settlement Price at Expiration.

6. Settlement Price at Expiration

The Settlement Price at the expiration of the Contracts shall be the arithmetic average of the IBEX 35 Index between 16:15 and 16:45 on the Expiration Date, with one value being taken per minute. The Settlement Price at Expiration shall be rounded to one decimal position.

For the calculation of the average, the value per minute shall be taken as the new value published immediately following the start of each minute according to the clock of the Sociedad de Bolsas.

If during any minute between 16:15 and 16:45 no new Index value is published, the last published value prior to the start of that minute shall be taken as the value for the calculation.

The abovementioned arithmetic average shall be arrived at using the following formula:

$$IL = \sum_{i=1}^{30} i / 30$$

IL = Settlement Value of the Index at the expiration of Contracts.

i = Value of the Index each minute.

Adjustment to the general rule

MEFF will set, by means of a Circular, the necessary adaptations to the general rule for the calculation of the Settlement price at Expiration when, during the period of calculation, one or several stocks are suspended or enter into a volatility auction, or SIBE technical failure occurs.

7. Margin Calculation

Calculation shall be carried out on the basis of portfolio analysis, taking into account all Contracts (options and futures) in a portfolio and arriving at the positive or negative value of the portfolio under the simulated worst-case scenario.

The valuation model to be used shall be specified by Circular, as shall be the model adjustments, the simulated scenarios and the variables necessary for the full calculation.

8. Daily Settlement of Gains and Losses

Each day, prior to the calculation of Margins in combination with a portfolio's Options position, the calculation of the Daily Settlement of Gains and Losses corresponding to the Futures position for each expiration shall be carried out.

The Settlement shall correspond to the net sum of the following operations on each account:

a) Futures bought: if the Price of the Future is lower than the Daily Settlement Price, the sum corresponding to the difference shall be credited; if the Price of the Future is higher than the Daily Settlement Price, the sum corresponding to the difference shall be charged.

b) Futures sold: if the Price of the Future is lower than the Daily Settlement Price, the sum corresponding to the difference shall be charged; if the Price of the Future is higher than the Daily Settlement Price the sum corresponding to the difference shall be credited.

c) Futures bought and sold on the day of the calculation: the same operations as in a) and b) shall be carried out with the applicable Price of the Future being the one agreed in each Transaction.
