

## CBOE Information Circular IC15-053 CFE Information Circular IC15-038

**Date:** August 3, 2015

**To:** Volatility Index Derivatives Market Participants

**From:** Research and Product Development Department

**RE:** Dissemination of Spot (Cash) Volatility Index Values on Expiration Days for Volatility Index Derivatives

---

**This circular updates CBOE Information Circular IC14-035 and CFE Information Circular IC14-023**

Chicago Board Options Exchange, Incorporated (CBOE) and CBOE Futures Exchange, LLC (CFE) are updating this circular in connection with the listing of weekly (non-standard) 30-day CBOE Volatility Index (VX) futures on CFE. This circular updates and replaces CBOE Information Circular IC14-068 and CFE Information Circular IC14-023 by: (1) adding weekly expiring 30-day volatility index derivatives and (2) deleting references to CBOE Short-Term Volatility Index (VXST) derivatives, which no longer trade on CBOE and CFE.

\* \* \* \* \*

As the calculator of volatility indexes that underlie options and futures (including the CBOE Volatility Index (VIX)), CBOE has an established general practice regarding the timing of disseminating spot (cash) 30-day volatility index values on expiration days for derivatives on those indexes.

### Standard and Weekly Expiring 30-Day Volatility Index Derivatives

CBOE will not begin disseminating the spot (cash) values for a volatility index that CBOE calculates until the constituent option series that CBOE will use to calculate the exercise / final settlement value for expiring weekly and standard Volatility Index options and futures have opened. After the constituent option series have opened, CBOE will begin disseminating spot (cash) values for the related volatility index. For example, on Wednesday, August 5, 2015, CBOE will not begin disseminating the spot (cash) VIX value until all of the constituent S&P 500 Index (SPX/SPXW) series used to calculate the final settlement value for the expiring weekly VX futures (ticker VX31) have opened.
